

Jack Cirolì

Boston, MA (open to relocation) | jvciròli@outlook.com | (401) 602-6018 | linkedin.com/in/jack-cirolì

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, SQL

Systems & Networking: Linux, TCP/IP, DNS, HTTP/TLS, VNets/VPCs, peering, load balancing, ingress, firewalls/NSGs

Infrastructure: Kubernetes (AKS, EKS, on-prem), Docker, Terraform, MySQL, AWS, Azure

CI/CD & Observability: Azure DevOps, Jenkins, Artifactory, Prometheus, Grafana, Splunk

Web & Services: REST APIs, Node.js, React, serverless (AWS Lambda, S3, Cognito)

AI Engineering: Claude Code, MCP, agent orchestration, prompt & context engineering, AI-assisted code review

EXPERIENCE

FNZ — global wealth-management platform

Boston, MA

Software Engineer, Cloud Platform

May 2025 – Sep 2026

- Developed a multi-cloud Kubernetes platform (AKS, EKS, on-prem) from R&D to production as the team grew from 3 to 15+ engineers, owning critical components end-to-end; the platform served 100+ clients via self-service provisioning
- Led capacity planning and SKU selection for a **500+ cluster fleet** across Azure, AWS, and on-prem, developing capacity plans, sizing compute, storage, and node pools for new clients, and driving recurring cost-optimization initiatives
- Provisioned and managed cloud networking in Terraform across Azure and AWS client environments: VNets/VPCs, subnets, peering, load balancers, Kubernetes ingress, DNS, NSGs/security groups, and private endpoints
- Triaged and debugged production incidents, including network issues, across Linux-based clusters in the on-call rotation; built Splunk, Prometheus, and Grafana monitoring with automated AI triage to cut time to detection
- Conceived and led delivery of an autonomous AI bug-resolution agent that **detected or fixed ~50% of all bugs raised** (rolling 30-day window); built on Claude Code + Azure DevOps MCP, it diagnosed nightly test failures, filed Jira bugs, validated fixes by re-running pipelines, and opened PRs for high-confidence fixes
- Implemented responsible AI safeguards for unattended production use: least-privilege service identity, confidence gating and pipeline-verified accuracy checks before any PR, human review of agent PRs, and per-bug cost tracking
- Built a Python/Terraform regression-testing framework running nightly end-to-end deploys, health checks, and teardowns across 4 replicated client environments, catching regressions across all supported configurations
- Migrated platform config generation from Terraform to C++, cutting generation time **from minutes to seconds**; built self-service config workflows and AI-friendly documentation so teams onboard new clients independently

Solid State Scientific Corporation — DoD contractor

Nashua, NH

DevSecOps Engineer

Nov 2023 – May 2025

- Resolved production incidents across AWS infrastructure and CI/CD as part of the on-call rotation
- Helped cut the client's AWS spend by **~\$2M per month** through a team-wide capacity optimization effort
- Built a Python REST API integrating AWS Secrets Manager, Artifactory, and certificate authorities to automate TLS certificate and credential lifecycle management, eliminating manual credential handling
- Drove Terraform and Jenkins Configuration-as-Code adoption, migrating legacy resources off manual provisioning

New Breed Marketing

Burlington, VT

Software Engineer Intern

May 2022 – Aug 2022

- Built a full-stack serverless web app (React, Node.js, Lambda, MySQL-backed REST API) used by 1,000+ people daily

EDUCATION & CERTIFICATIONS

Worcester Polytechnic Institute

Worcester, MA

B.S. in Computer Science | GPA 3.8 / 4.0

May 2023

AWS Certified Solutions Architect – Associate | CompTIA Security+
